

SOMANATH MUDULI

Email: sbnm1994@gmail.com

Mobile: +91-9438080582

Objective:

To contribute to a dynamic and innovative organization by utilizing my skills in product development, automation and collaborating with a diverse team to drive organizational and my personal growth, success, and continuous improvement.

Professional Summary:

- 9 years of experience as a Cloud and DevOps Engineer.
- Experience working with applications built in Java, Node.js, React, and .NET, contributing to the automation of build, test, and deployment pipelines in a DevOps environment.
- Proficient in working within DevOps environments, with hands-on experience in Azure, AWS, and both Linux and Windows operating systems.
- Configured and integrated SonarQube with Jenkins to automate static code analysis during the build process, ensuring code quality by detecting issues early in the development cycle.
- Hands-on experience with GIT (distributed version control system), Ansible (configuration management tool), Docker (containerization platform), Jenkins (continuous integration tool), and Maven (build automation tool).
- Configured and maintained Jenkins to implement continuous integration (CI) processes for major releases, integrated with Maven to automate the build and packaging of deployable artifacts, and utilized Jenkins and Maven for server automation in both build management and deployment processes.
- Worked with OpenShift and Kubernetes for managing microservices, including handling deployments, services, Helm charts, PVCs, config maps, and Nginx Ingress Controller.
- Experienced in using build tools like Maven to build deployable artifacts, such as JAR and WAR files, from source code.
- Utilized GIT for source code management, including tasks such as creating repositories, cloning, committing, pushing changes, and stashing changes.
- Experience in github actions to build cicd pipeline migrating from Jenkins.
- Provisioned, configured nodes, and deployed applications using Ansible.
- Configured cron jobs and scheduled tasks for automated execution.
- Utilized Jira as a ticketing and project tracking tool, and ServiceNow for change approval in both major and minor releases.
- Experienced with Docker containers, including writing Dockerfiles, creating and managing images, snapshots, and container lifecycle, with expertise in Docker Engine, Hub, Compose, and Registry.

Technical Skills:

Operating Systems	Linux, Windows
Version Control Tools	GIT, BitBucket
Scripting Languages	Shell, PowerShell
Application/Web Servers	Apache Tomcat, Azure app service
Build Tools	Maven, Node, Dotnet

Cloud	Azure, AWS
Configuration Management Tools	Ansible
CICD	Jenkins, Github-Actions, TeamCity
Build Repository	Jfrog
Containerization	Docker
Container orchestration	OpenShift, Kubernetes

Professional Experience:

- Worked as a Build and Release Engineer at **Genesys international corporation limited**, Mumbai from **April 2017 to September 2021**.
- Worked as a DevOps Engineer at **Avantha technologies**, Mumbai from **September 2021 to September 2022**.
- Working as a Manager at **Deloitte Touché Tohmatsu India LLP**, Bhubaneswar from October 2022 to till date.

Educational qualification:

- Bachelor of Technology (**MECHANICAL**) from **Oxford college of engg & mang, Bhubaneswar, Orissa, India** (2011-2015) having Aggregate **71%**.
- +2 Science (12th) from **P.N junior college, Khordha, Orissa, India** (2009-2011) having **58%**.
- Matriculation (10th) from **Gediapalli High School, Gediapalli, khordha India** (2008-2009) having **63%**.

Projects Executed:

Project 1:

Project Name: Digital Transformation Office.

Client: Kenvue.

Role: DevOps Engineer

Environment: Bitbucket, NodeJS, Jenkins, Jfrog, SonarQube, Docker, Azure app service, Kubernetes.

Responsibilities:

- Created branching and merging strategy to maintain code review process.
- Write down automation scripts for build and deployment process such like Pods.yaml and Jenkinsfile, deployment.sh.
- Documented all the processes which we basically follow for build and release process.
- Involved all the releasees from lower environment to production release.
- Integrate unit test in CI process and SonarQube to check the code quality.
- Involved in end to process from project creation to application go live.
- Automated manual deployment process to windows VM.
- Written own Docker file to create infra to perform cicd activity.
- Automated manual rollback process.
- Involved in migration activity such as tool migration to cicd pipeline.
- Automated data bricks notebook deployment from one env to other env.
- Automated azure data factory pipeline to create the pipeline from lower env to higher env.
- Supervising the team member and leading the DevOps team.

Project 2:

Project Name: Strategic life cycle engine (STyLE).

Client: Royal Bank of Scotland.

Role: Build & Release Engineer

Environment: BitBucket, Maven, TeamCity, Nexus, Tomcat, Ansible.

Responsibilities:

- Worked as a build and release engineer.
- On call, incident response and incident management.
- Database refreshment, Backup & restore on every weekend.
- Daily health check on different environment like all services should up and running, No Argon routes are in maintenance mode, Remove all queues from Tibco EMS.
- Create merging strategy in Bitbucket.
- Integrate SonarQube in TeamCity & Created quality gate, profile for the respective project.
- Using build tools like MAVEN for the building of deployable artifacts such as jar & war from source code.
- Responsible for Continuous Integration (CI) and Continuous Deployment (CD) process implementation using TeamCity along with some PowerShell scripts to automate routine jobs.
- Configured and maintained TeamCity to implement the CI process for major releases and integrated the tool with Maven to schedule the builds.
- Perform deployments to multiple environments like Dev and QA environments.

Project 3:

Project Name: Trade and Transaction Reporting. CMRS Messaging Gateway.

Client: Royal Bank of Scotland.

Role: Build & Release Engineer

Environment: Bitbucket, Maven, SonarQube, TeamCity, Nexus, Ansible, Docker, OpenShift, Tomcat.

Responsibilities:

- Worked as a build and release engineer.
- Using build tools like MAVEN for the building of deployable artifacts such as jar & war from source code.
- Written playbooks, roles, templates using ansible to automate the process of provision, Deployment.
- Using TeamCity created build chain job to deploy tag in different environments.
- As most of the services are running in container platform OpenShift. Our responsibility to manage all those in OpenShift like properties change, restart services & preparing deployment yaml file.
- Also, few applications are deployed on tomcat based on Linux & windows server.
- Preparing release implementation plans and documents at the time of release.
- Creating issues in Jira for new implementation and changes. Also, we used ServiceNow as a ticketing tool.

Project 4:

Name: Real time events.

Client: Carmera Inc.

Role: DevOps Engineer

Environment: GitHub, Jenkins, Ansible, AWS, Docker, Nexus.

Responsibilities:

- Launching Amazon EC2 Cloud Instances using Amazon Web Services and Configuring launched instances with respect to specific applications.
- Setup and monitor daily continuous/production builds. End To End CI/CD set-up Between Jenkins & Git.
- Configured automatically trigger build whenever any push comes towards the develop, Master or Hot fix Branches and Reports Send to the Mandatory Reviewers.
- Software Configuration management (Automate CI& CD pipe using Ansible, Maven, Jenkins & GIT).
- Creating playbooks in Ansible for configuration and Deployment activities.
- Configuring Apache tomcat server using Ansible.
- Configured Jenkins Jobs, install plugins for generating Project artifacts.
- Perform deployments to multiple environments like Dev and QA environments.

Declaration:

I hereby declare that the above-mentioned information is true to best of my knowledge and belief.
